EDUCATION

University of Illinois Urbana-Champaign

Jan. 2026 – Dec. 2029 (Expected)

PhD in Computer Science

- **Advisor:** Prof. [Tal August](#)

University of Michigan, Ann Arbor

Aug. 2022 – May. 2024

Master in Information Science | **GPA: 4.00/4.00** | *Distinguished Thesis*

- **Advisor:** Prof. [David Jurgens](#) and Prof. [Lu Wang](#)
- **Related coursework:** Applied Data Science (A+), Information Retrieval (A+), Game Theory (A+), Math for Data Science (A+), Big Data Analytics (A+), NLP Algorithm (A), Machine Learning (A)

Shanghai Jiao Tong University

Sep. 2019 – Aug. 2023

Bachelor in Electrical and Computer Engineering

- **Related coursework:** Computer Vision (A), Computer Architecture (A), Intro to Linguistics (A)

WORK EXPERIENCE

Research Assistant

May. 2024 – Aug. 2025

Advisor: Prof. [David Jurgens](#) and Prof. [Lu Wang](#)

University of Michigan

PUBLICATIONS

RESEARCH EXPERIENCE

Concluded Projects

Improving LLMs' general performance by System Prompt Optimization

Feb. 2024 – May. 2025

Advisor: *David Jurgens*

University of Michigan

- Design an edit-based genetic system prompt optimizer *SPRIG* that generally improves LLM performance across 47 diverse benchmarks.
- Discover strong generalization capability of system prompt optimization across tasks, models, languages, and even out-of-domain challenges, and its complementary effect with existing task-specific optimizers.
- Develop new RL strategies to efficiently explore and expand the design space of system prompts.
- Lead the whole project independently, completing all aspects from research ideation to paper writing.

Factuality Evaluation pipeline and benchmark in real-world scenarios

May. 2024 – Nov. 2024

Advisor: *Lu Wang*

University of Michigan

- Develop a retrieval-based factuality evaluation pipeline for long-form text that is more fine-grained, efficient and aligns better with human than existing work.
- Build a benchmark of prompts that are factually challenging to LLMs by filtering LMSYS-1M dataset, clustering representative prompts, and selecting based on their scores on the designed evaluation pipeline.
- Lead experiments on open-source models, reproduce 3 existing studies as baselines, and implement parallel optimization for a 10x speedup.
- Contribute extensively to paper writing and post-submission tasks, including drafting key sections, analyzing results, creating visuals, managing code repository, and preparing rebuttals.

Assessment of LLM Simulation Ability of Human Responses in Dialogue

Jul. 2024 – Oct. 2024

Advisor: *David Jurgens*

University of Michigan

- Implement 15 evaluation metrics for LLM simulation quality across lexical, syntactic, semantic, and style features.
- Lead the collection of 50 instruction prompts and generate 1M dialogue simulation results from 9 LLMs.
- Set up annotation platform for the whole lab to collect human annotations as a baseline.
- Lead the project as the main contributor to coding, paper writing and post-submission tasks.

Modeling Intent, Expectation, and Responsiveness in Email Conversations

Mar. 2024 – Jun. 2024

Advisor: *David Jurgens*

University of Michigan

- Preprocess raw Email data and build an email relationship network to sample and construct a dataset for analysis.
- Evaluate LLM's ability to infer Email Intent by fine-tuning RoBERTa and running zero-shot inference on Llama-3.
- Serve as the main contributor to annotating, coding, paper writing and post-submission tasks.

Robustness of LLMs' personality under Psychometric Instruments

Sep. 2023 – Dec. 2023

Advisor: *David Jurgens*

University of Michigan

- Build evaluation dataset and metrics that measures the robustness of various LLMs' personalities under spurious prompt variation and rephrased statements, and evaluate on 17 different LLMs.
- Experiment the personality and robustness shifts under different conditions, such as injecting personalities through prompts, and fine-tuning LLMs (Llama2, Flan-T5, etc.) on various corpora (Bible, 4chan, r/Donald, etc.).
- Lead the project and contribute to most coding, experiments, writing, and post-submission tasks such as the rebuttal, code repository, Twitter thread, and related presentations.
